## EXPERIENCE

- **Backend Engineer Intern** Feb 2026 - Present
  **Makunai Global** *Noida*
  - Built and maintained backend services using Django and Django REST Framework, delivering RESTful APIs for authentication, CRUD operations, filtering, search, and validation across multiple modules.
  - Optimized API response times by tuning Django ORM queries with `select_related`, `prefetch_related`, indexing, and pagination, reducing redundant database hits on high-traffic endpoints.
  - Implemented background/async workflows using Celery with Redis as the message broker to offload long-running tasks (emails, notifications, scheduled jobs) from the request-response cycle, improving responsiveness.
  - Added Redis-based caching for frequently accessed endpoints and applied rate limiting/throttling on public APIs to reduce database load and safeguard backend services from abuse.
  - Containerized services with Docker, worked with Kubernetes for deployment, and followed Git-based workflows – testing APIs with Postman.
  - Implemented relational data models, custom serializers, authentication/authorization layers, and structured error handling across projects.

## PROJECTS

**Travel Booking Application (Django, MySQL, HTML, CSS, Bootstrap)AUG-2025)** Github Live
*A Role-Based access control platform where admin and user can login separately*

- Developed a full-stack travel booking platform supporting user registration, authentication, travel search, and bookings for flights, trains, and buses.
- Implemented booking workflows with seat-availability validation, cancellation, and profile updates, added search, filtering by destination, mode, and price, and optimised queries for faster results.
- Deployed and maintained the application on PythonAnywhere.

**Departmental E-Commerce Store (Django,Django REST Framework, SQLite)(Feb-2026)** Github
*A scalable E-Commerce Backend REST API built with Django and Django REST Framework (DRF)*

- Built a multi-role e-commerce application using Django, implementing separate **Customer and Vendor authentication/authorization flows, role-based dashboards, and protected** functionality using Django Groups and login-based access control.
- Designed relational data models for Customers, Vendors, Products, Categories, Addresses, and Orders, with foreign-key relationships, validation, unique product slugs, inventory fields, and order-status tracking using Django ORM.
- Implemented end-to-end e-commerce workflows including **vendor product CRUD, product search/category filtering, customer ordering, and order tracking**, while enforcing vendor ownership when modifying products.

## SKILLS

**Programming Language**: Python, C++, SQL
**Backend Technologies:** Django, Django REST Framework, REST API Design, JWT Authentication, Authorization,Middleware, Serializers, Pagination
**Database & ORM:** PostgreSQL, MySQL, SQLite, Django ORM, Database Design, Indexing, Normalization, Query Optimization, `select_related`, `prefetch_related`
**Dev Tools:** Git/GitHub, CI/CD, Docker, Kubernetes, Postman
**Core CS Concepts:** Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems

## EDUCATION

**Btech Computer Science and Engineering** 2022 - 2026
ABESEC College Of Engineering CGPA : 7.6
